

Mustang Creek Estates

RESIDENTIAL ASSISTED LIVING & MEMORY CARE

NOW OFFERING PHARMACOGENOMICS (PGx) TESTING

*Accurate Diagnostics Using
PT-PCR through GeneID*

As part of our commitment to providing personalized, high-quality care Mustang Creek Estates is excited to offer Pharmacogenomics (PGx) testing through GeneID.

This innovative testing helps take the guesswork out of medication management by using each resident's unique genetic makeup to guide more effective treatment decisions. We're proud to bring this advanced approach to our communities to better support the health, comfort, and well-being of those we serve.

Our goal is always to enhance quality of life for our residents and provide peace of mind for their families. By offering PGx testing, we are taking another step forward in delivering individualized care that can lead to better outcomes and fewer medication challenges. We're excited about the difference this can make and are happy to help determine if this benefit is right for you or your loved one.

- **Personalized Medication Plans** – PGx testing uses a simple cheek swab to analyze how a resident's genes affect their response to medications, helping providers choose the most effective options.
- **Reduces Trial & Error** – Helps eliminate the guesswork in finding the right medications and dosages, leading to faster, more effective treatment.
- **Improves Quality of Life** – By identifying medications that work best, residents often experience better outcomes with fewer side effects.
- **Especially Helpful for Cognitive & Behavioral Needs** – Particularly beneficial for those with dementia, anxiety, depression, and other psychological or behavioral challenges.
- **One-Time Test, Lifelong Value** – Results can be used throughout a resident's life to guide future medication decisions at any stage of care.
